PRINT MANAGEMENT IN A BOX

Color Management

Best possible output results on any connected plotter is guaranteed. The CAD|STATION color management module is fully compliant to ICC standards. Additionally RATIO provides individual ink limitations for many different papers.

Error Free Printing

Every print job is checked by the client application ensuring the print system is able to handle the user settings. If a setting such as special media or media size is not available at the moment, the client application will automatically warn the user.

Automatic Re-Routing

Automatically re-routing of pending print jobs from a plotter that is in service or not working properly to another device with similar capabilities.

Load Balancing & Set Split

Automatically distribution of print jobs to the best available plotter for to maximize throughput and minimize waiting time. Jobs can be split between connected plotters for optimal output speed.

Complete Error Recovery

In case of trouble like empty paper or empty ink the CAD|STATION knows exactly, where the output stops and will continue exactly with the next entry of the set after paper or ink has been refilled.

Alarm Manager

The alert manager can be setup to automatically notify the user in case of any print problem and alert the administrator in case an operator or service technician is needed.

3D Graphical User Interface

The RATIO 'First to market' 3D user interface shows all relevant information of the system in a graphical user interface at a glance. Unskilled users can understand the system without further training.

Internet Client

With the included PLOTCLIENT|WEB print jobs can be sent via Intranet/Internet, independent from location or the client OS. Connected users can see the status on their jobs at any time. No plug-in needed.

Accounting

With comprehensive accounting all print jobs are analyzed and the costs for ink and media can be automatically summarized by user name, project or customer for a selected time frame.

Mandatory Job Settings

Users can be forced to provide accounting related information together with their print job. This information can either be taken from a predefined list or typed in by the client (server setting). All needed accounting information is always provided.

Stamping

Put electronic stamps with individual text such as „Draft“ or „Confidential“ on the documents. Additionally, automatic stamps with time, date, user name or project can be generated.

Option CAD|STATION Scan

The professional scan solution offers easy high speed b&w and color scan and copy functionality. All scan and copy jobs are fully cost controlled. The software is intuitive and needs no training.

SPECIFICATIONS

Hardware (in the Box)	Intel Core 2 Duo E4500 Processor 2 x 2.200 MHz, 2GB RAM, 500GB HD
Software (installed/included*)	Operating System Microsoft Windows XP embedded SP2c, PLOTBASE PM Server Software, Client Software* (PLOTCLIENT PM, PLOTCLIENT WEB, WINPRINT PM, PLOTCLIENT HDI, Accounting & Invoicing), Load Balance & Set Split, Multistamping, Mail Response System, Web Watch, ODBC Data Import, Accounting. <i>Internet Access required for remote installation.</i>
